MOHAMMED JISHAD

Odoo Developer | Python | ERP Implementation

Perinthalmanna, Kerala, India | +91 8592081025 | jishadalikkal1919@gmail.com

LinkedIn | GitHub

Nationality: Indian | Notice Period: Immediate | Open to relocation across GCC

PROFESSIONAL SUMMARY

Odoo Developer delivering custom Odoo 18 modules on live, multi-branch ERP implementations across retail, F&B and service-management domains — Python ORM, business logic, OWL 2 frontend customisation, REST/JSON API endpoints, and PostgreSQL-backed reporting. Functional coverage spans Sales, Purchase, Inventory, Manufacturing, Accounting, POS, Helpdesk, HRMS and Reporting. Available immediately, open to relocation across the GCC.

TECHNICAL SKILLS

Odoo Development: Odoo 18 (Community & Enterprise), Odoo 17 Community, Odoo ORM, Custom Module Development, Model Inheritance, Wizards (TransientModel), Scheduled Actions (ir.cron), Record Rules & Security Groups, Multi-Company / Multi-Branch Architecture

Functional Modules: Sales, Purchase, Inventory, Manufacturing (MRP/BOM), Accounting, Point of Sale, Helpdesk, HR & Payroll, Website, CRM, Dashboards, Reporting

Frontend & Views: OWL 2 (Odoo Web Library), JavaScript (ES6+), XML Views (Form, Tree, Kanban, Search, Pivot), XPath Inheritance, QWeb Templates, HTML5, CSS3 / SCSS

Backend & Data: Python 3.12, PostgreSQL (queries, joins, indexing), SQL, REST/JSON APIs (Odoo HTTP Controllers, JSON-RPC), QWeb PDF & Thermal Reports, XLSX Reports (xlsxwriter), Portal Controllers, Mail Servers (SMTP/IMAP)

Tools & DevOps: Git (branching, code review), Docker & Docker Compose, Linux, Module Deployment, Debugging & Testing, Agile Collaboration

Data & BI: Power BI Dashboards, EDA, SQL-Based Reporting, Data Cleaning & Validation, Excel, BigQuery

Compliance: Indian GST (GSTR-1, GSTR-3B), Tax Configuration, Multi-Journal Accounting Setup

Languages: English (Professional), Malayalam (Native), Tamil (Conversational)

PROFESSIONAL EXPERIENCE

Odoo Developer — Prosevo Technologies, Malappuram, Kerala, India **02/2026 – Present**

- Develop custom Odoo 18 modules on live client ERP implementations, translating functional requirements gathered by the implementation team into production code.
- Build backend business logic using Python and the Odoo ORM: custom models, model inheritance, computed and related fields, constraints, onchange methods, and TransientModel wizards.
- Design and extend XML views (form, tree, kanban, search, pivot) using XPath inheritance, and develop QWeb templates for PDF, A4 and 80mm thermal reports.
- Customise the Odoo frontend using OWL 2 components, JavaScript patches and SCSS, including POS and backend web-client overrides.
- Build Odoo HTTP controllers (@http.route) for customer-portal access and API-style JSON endpoints.
- Implement multi-company and multi-branch configurations with record-rule-based access control and branch-scoped data visibility.
- Configure end-to-end Sales, Purchase, Inventory, Manufacturing and Accounting workflows, including Indian GST tax reporting (GSTR-1, GSTR-3B).
- Write and optimise PostgreSQL queries for reporting wizards, financial reconciliation logic and backend data operations.
- Automate recurring processes with scheduled actions (ir.cron) and template-driven email notifications.
- Manage development through a Git branching workflow (feature branches, code review, promotion across development, quality and UAT) on containerised Odoo deployments using Docker and Docker Compose.

Process Executive — Infolks, Palakkad, Kerala, India **03/2025 – 09/2025**

- Performed data labeling and QA validation for computer vision datasets, using Python-based validation scripts for dataset filtering and consistency checks.

Data Science Intern — iDatalytics, Kochi, Kerala, India **08/2024 – 11/2024**

- Performed EDA and SQL-based analytics in Python and built Power BI dashboards with KPIs and performance metrics for stakeholder reporting.

KEY ODOO PROJECTS

MYG Enterprise Helpdesk & Service Operations ERP **Odoo 18**

Retail Electronics Chain — multi-branch ticketing and service management platform serving hundreds of showrooms across 14 districts.

- Developed the custom myg_helpdesk addon covering the full ticket lifecycle, automated state transitions and server-side validation preventing invalid state jumps.
- Implemented stack-based inter-departmental ticket transfer and return using TransientModel wizards, maintaining audit breadcrumb paths of every department, user and employee handoff.
- Built district-aware automatic team lead assignment and an embedded weekly solver availability matrix rendering live HR attendance and ticket workload inside the ticket form.
- Engineered SLA controls with mandatory start/end time validation, a controlled end-time extension wizard, and ir.cron scheduled actions for auto-reminders and closure.
- Implemented a six-tier role-based access model using ir.rule record rules scoped by branch, district and department, with automatic security group synchronisation.
- Developed OWL 2 / JavaScript frontend patches and XLSX reporting wizards (xlsxwriter) for employee-, department-, district- and SLA-compliance analytics, plus a customer portal controller.

Mario Multi-Branch Restaurant ERP **Odoo 18 Community Edition**

F&B / POS — multi-outlet restaurant, cafe and juice-bar ERP unifying POS, kitchen operations, manufacturing and multi-company accounting.

- Developed Python and OWL/XML customisations within a 24-module custom addon suite deployed via Docker Compose on Odoo 18 / PostgreSQL 16 across development, quality and UAT environments.
- Refactored the multi-session POS Day Close financial reconciliation engine, correcting opening-balance carry-forward across HR petty-cash expenses and reconciled vendor bill payments (Cash and UPI journals).
- Delivered OWL/XML POS overrides enabling cache invalidation across cashier terminals, and worked within a POS-to-MRP architecture triggering BOM explosion and Manufacturing Orders from confirmed sales.

PERSONAL PROJECT — INDEPENDENT DEVELOPMENT

Textile ERP Suite **Odoo 18 Community**

Self-built, GitHub — end-to-end textile and garment manufacturing ERP developed independently, addressing domain gaps standard ERPs don't handle: decimal/roll-based fabric quantities, ratio-cut multi-size production, and lot-level quality gating.

- Designed and built 8 custom Odoo addons solo: shortage-based MTO sales automation, multi-variant manufacturing orders (single MO across multiple sizes with BOM explosion), fabric yield/waste tracking, and a quality-gate/rework workflow that hard-locks deliveries until QC passes.
- Built a real-time OWL 2 management dashboard (JSON-RPC backend) and a four-tier cost-sheet engine (material, labour, machine, overhead) with 360° lot traceability.
- Built POS extensions for roll/lot selection, decimal-precision meter sales, and manager-PIN-gated discount authorisation via OWL client-side patches; wrote automated test suites and maintains separate sandbox/demo databases.

EDUCATION

B.Tech, Artificial Intelligence and Data Science **2020 – 2024**
Dhanalakshmi Srinivasan College of Engineering, Coimbatore, India — CGPA: 7.9

Higher Secondary (Computer Science), State Board **2018 – 2020**
KHSS Kumaramputhur, Kerala, India — 75%

CERTIFICATIONS

- Google Data Analytics Professional Certificate — SQL, BigQuery, Data Visualisation
- Data Science with GenAI — EDA, Preprocessing, ML Workflows, Power BI Reporting
- Python Machine Learning — Python, Data Structures, ML Algorithms, Model Building

ADDITIONAL INFORMATION

Visa Status: Requires sponsorship | Passport: Valid | Relocation: Open across GCC countries
